DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: On page 13, line 14, "cpmtacts" should be --contacts--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 7, 19, 22 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by PCT publication to Briscoe (cited in IDS).

The publication to Briscoe discloses vehicle adapted to ride on the surface having a head assembly 8, an actuator 10 supporting the head assembly. The actuator including a pressure sensor detecting a position of the head assembly relative to the surface, a head position control 28 responsive to input from an operator, and a driving circuit 26,31 responsive to the head position control and responsive to the sensor for energizing the actuator to raise and lower the head assembly.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 1744

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over PCT publication to Briscoe.

Briscoe discloses the claimed invention except for the vehicle having pneumatic tires. Briscoe is silent as to what type of tire is employed in the cleaning vehicle. It is known by those skilled in the art that pneumatic tires are used in surface cleaning vehicles. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide pneumatic tires to the vehicle of Briscoe as either pneumatic or rigid tires are considered mechanical equivalents.

Allowable Subject Matter

8. Claims 1-6 are allowed.

9. Claims 8-17, 20 and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

10. The following is an examiner's statement of reasons for allowance: With respect to claim 1, the prior art does not disclose nor render obvious the claimed combination of subject matter, particularly a sensor detecting a distance between the support and the head assembly and a driving circuit responsive to the head position control and responsive to the sensor for energizing the actuator to raise and lower the support so that the distance between the support and the head assembly as detected by the sensor corresponds to the desired position as indicated by the head position control.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The patents to Erko et al., Knutson, Kaczmarz et al. show the current state of the art in controlling the force of the brushes of cleaning machines.
